

# THE FLOC BOX™

AWARD  
WINNING  
INNOVATION

SINCE

1975

## UNIT SIZES

- 75L
- 200L
- 400L

Erosion Control's Floc Box™ is designed to replicate the exact principals of the TP90 rainfall activated shed to chemically dose sediment retention ponds. Weighing in at just 45kg prior to the addition of chemical, The Floc Box™ is made of a high quality medium density polyethylene complete with a high spec UV package. Its weight means that it is very easy to install and relocate on site. The unit provides a treatment solution for DEBs right through to 4-5 hectare catchments. The inclusion of an adjustable tray allows for simple setting and adjustment of chemical dose rate. A series of pre-set header tank holes and caps allow for easy setup and alteration of the low flow, high flow drains and pre dosing storage. Further innovations have allowed for system recharge with an access bung for rainwater removal and chemical recharge with 18mm hose fittings, eradicating the risk of unwanted spills.

OVER 1000 UNITS SOLD IN NZ & AUSTRALIA!

## UNIT SIZES

- 75L
- 200L
- 400L

- Polycarb Sheet for Sizing roof
- Filter Screen
- 48L Header Tank
- Adjustable header and drain holes
- Removable bung

SINCE

**1975**

As an award winning innovation, our Floc Box™, has sold over 1000 units across NZ and Australia making it the predominant methodology for the treatment of sediment laden runoff.

Erosion Control Co can pre-size your catchment tray and header tank drains as per your chemical treatment management plan (which we can also prepare). We will deliver to site (Auckland and Hamilton), along with the chemical required to operate the system making us a “one-stop shop” with ongoing support and expertise when required. We will provide training for operation, record maintenance and reporting, or if preferred, we can manage the entire treatment system allowing you to focus on other components of your project.
